1 Network figures

This synthetic report sets out the monthly figures of a fictitious regional water supply network. It is written for the operating board and the customer panel, and every name and value in it is invented for the purpose of testing a comparison tool.

The figures are taken from the operational database at the end of each month. Where a figure is provisional, this is stated in the text. Values are rounded for presentation, so totals in tables may differ slightly from the sum of their parts.

Two boreholes at Yarrowby were rehabilitated by jetting, and pumping tests were repeated in October. The trend at Wexcombe reversed in May after the works described in the previous section. Results for Netherby were in line with the previous year.

At Coldharbour the change compared with the previous year is within the uncertainty of the measurement. Groundwater levels in the chalk boreholes at Wexcombe were close to normal for the time of year, and blending continued at Thornby.

Month	Netherby	Thornby	Wexcombe	Oakhanger	Upwell
January	88.6	58.7	37.7	70.8	62.9

Month	Netherby	Thornby	Wexcombe	Oakhanger	Upwell
February	73.9	70.0	39.0	69.5	38.8
March	36.6	25.1	67.7	63.4	16.9
April	94.4	45.6	22.5	92.2	34.3
May	55.6	81.5	63.7	29.3	17.4
June	67.5	43.0	47.8	31.4	20.3
July	38.5	45.7	87.7	30.0	37.4
August	55.6	64.5	35.6	97.8	40.3
September	92.8	63.3	60.9	24.9	86.4
October	91.5	68.6	47.4	34.6	62.5
November	74.4	80.8	97.1	14.7	48.3
December	11.7	61.8	74.8	24.9	12.5

Table 1 – Monthly indicators for groundwater, further sites

The asset register entry for Gallow Hill was updated in October to reflect the equipment now installed. The observation borehole at Pellow Down showed a seasonal range slightly below average, and samples from Marlpit were analysed within a day of collection.

A contractor carried out the work at Ravensgill under the framework agreement, finishing ahead of plan. The risk assessment for Thornby was reviewed in October, and the control measures were found to be adequate for the coming year.

Staff from the Coastal depot supported the work at Saltcote during the busy period in June. The long-term trend at Longridge shows a gradual improvement, and the planned survey of the Eastgate main was brought forward by one month.
