SYNTHETIC probe. This invented depot report lists the weekly deliveries of a fictitious supplier; every name and value is made up to test a document comparison tool.

This edition adds a paragraph above the table, which pushes the table further down the page, so that the page break inside the table falls a few rows earlier than before. The figures themselves are the same in both editions.

Deliveries are counted per week at five depots. The figures are rounded to one decimal place, so the totals may differ slightly from the sum of the parts.
